

CRESCENT ENGINEERING

Data Management System

It is a high level data management, query and reporting system designed to maximize data assets, information and business intelligence. This powerful application can be used for data analyses, data extraction, data queries and report generation.

The Data Management System efficiently consolidates all your Data Assets into a centrally shared Storage for the most effective management, access and reporting allowing critical information to be available on demand across networks.

It includes all the functionality required for managing and processing data as a valuable resource. An essential data management and reporting system for advanced data analysis, reporting, management information and statistics.
